SUMMARY

Backend engineer with seven years of experience building payment and data services in Go and Python. Focused on reliable APIs, clear observability and pragmatic system design, with a track record of mentoring engineers and leading migrations without downtime.

SKILLS

Programming Languages: Go, Python, SQL, TypeScript
Frameworks & Libraries: FastAPI, Django, gRPC
Cloud & DevOps: AWS, Docker, Kubernetes, Terraform, GitHub Actions, Grafana
Data & Databases: PostgreSQL, Redis, Kafka
Developer Tools: Git, pytest, Postman

EXPERIENCE

Senior Backend Engineer Feb 2022 – Present
Ledgerline · Austin, TX

- Led the migration of the payments ledger from a monolith to three Go services with zero customer-facing downtime.
- Cut p99 latency on the transaction API from 820 ms to 190 ms by reworking PostgreSQL indexes and caching hot reads in Redis.
- Built an event pipeline on Kafka that replaced nightly batch jobs and made balances available in near real time.
- Mentor three engineers and run the team's weekly design review.

Software Engineer Jul 2019 – Jan 2022
Parcelwise · Remote

- Designed a Python and FastAPI service for carrier rate quotes, serving about 2 million requests a day.
- Introduced Terraform and GitHub Actions for infrastructure changes, ending manual console edits in AWS.
- Added structured logging and Grafana dashboards that halved the mean time to detect incidents.

Junior Developer Jun 2017 – Jun 2019
Copperleaf Analytics · San Antonio, TX

- Maintained Django reporting tools used by 40 client accounts.
- Wrote integration tests that raised coverage of the billing module from 35% to 80%.

EDUCATION

B.S. Computer Science 2013 – 2017
University of Texas at San Antonio

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
